

## MAPPED ASSEMBLIES

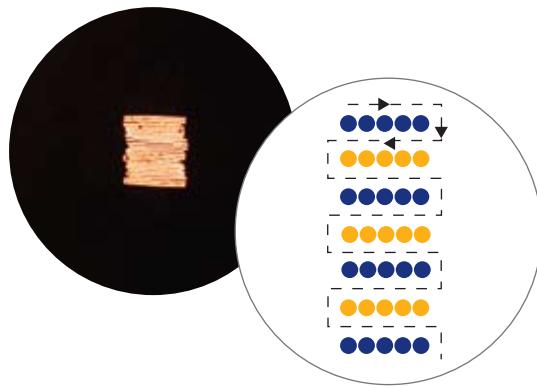

### FEATURES

- assembly for medical imaging
- 460 fibers, 40µm core
- successive layers within 2D array mapped into segments within 2 parallel linear arrays

*View of the ferrule with  
2 parallel linear arrays*

*View of the ferrule  
with 2D array;  
actual array dimensions  
1.2 x 1.4 mm*

## MAPPED ASSEMBLIES

### FEATURES

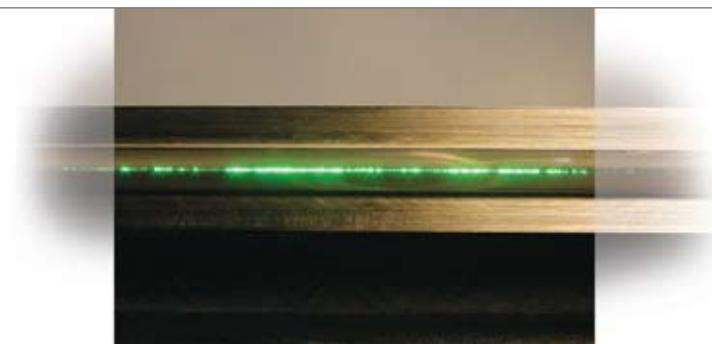

- bundle of 300 fibers, 100µm core, for sensing application
- fibers from successive layers within hexagonal end arranged along the linear array
- fibers in linear array spaced 400µm apart
- 3 broken fibers (maximum allowed: 6)

*View of hexagonal end*

*View of the linear end*

## FEATURES

- single or multi-branch
- arbitrary geometries and fiber distributions
- large fiber counts
- buffer stripped to increase efficiency

*Linear array of 109 fibers, 50 $\mu$ m core,  
divided into 2 channels*

*Bundle of 19 fibers, 50 $\mu$ m core,  
mapped into 2 branches*

*Bundle of 19 fibers, 100 $\mu$ m core,  
mapped into 2 branches*

*3 channel Raman converter;  
50 $\mu$ m core fibers;  
stripped buffer*

## MAPPED ASSEMBLIES

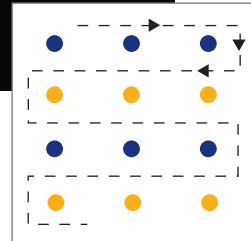

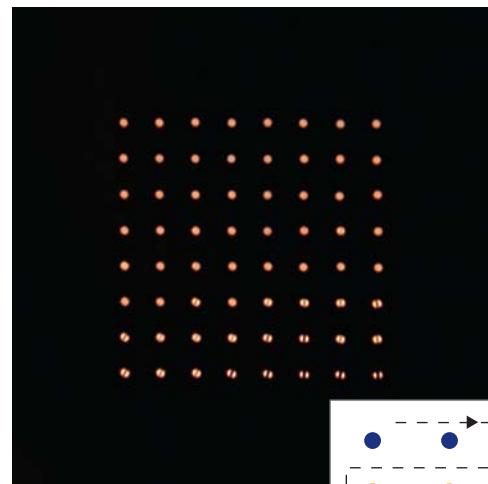

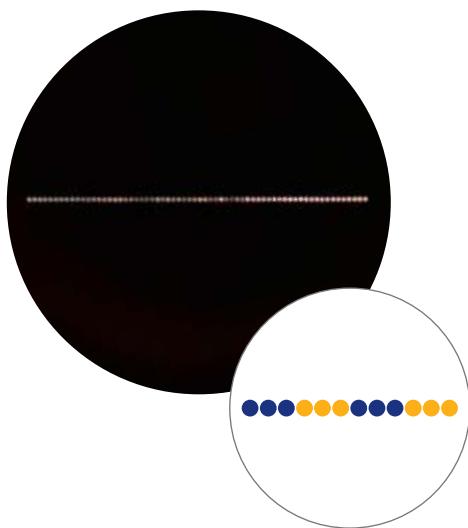

### CHECKERBOARD ASSEMBLY

- array of 8 x 15 fibers
- fibers structured in rectangular pattern
- no broken fibers allowed

### SERPENTINE 2D ARRAY

- array of 8 x 8 fibers
- fibers mapped into linear array in serpentine fashion

## MAPPED ASSEMBLIES

### FEATURES

- bifurcated assembly for astronomical imaging
- 338 fibers, 17 $\mu$ m core
- successive layers within 1.2 mm square 2D array mapped into segments within linear arrays

View of the ferrule with 2 linear arrays

## MAPPED ASSEMBLIES

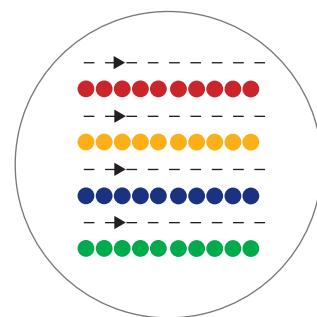

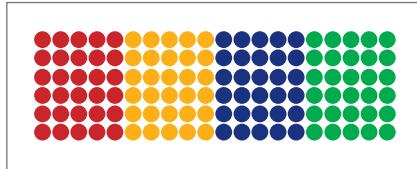

### FEATURES

- 32 x 32 square array of 200µm fibers
- fibers mapped into 4 branches representing company logo

### FEATURES

- assembly for medical imaging
- 648 fibers, 50µm core
- successive layers within 2D array mapped into segments within 4 parallel linear arrays
