Why Choose Complete Precast Solutions?

Because no two precast projects are the same

Precast walls are durable and resistant to impact and natural elements (mold, fire, and high winds). Wall panels are 100% customizable - shaped, sized and finished to meet any need.

Precast can take the shape of any mold and can replicate brick, block or signature aesthetics, such as photographs, monograms and/or custom designs.

On site, precast offers added safety measures for construction crews as they remain within the enclosed building envelope.

The Fritz-Alder Advantage

You need a precaster with significant experience in both the specialized areas of fabrication and installation. We have been doing just that in Ontario since 1972, working with some of the most prominent designers, and meeting the requirements of the most exacting customers.

Fritz-Alder Precast's Advanced technology system offers innovative designs and provides efficient production schedules to meet project needs.

Unique finishes to customize your project

With precast, there are infinite versatile options when it comes to colours and textures to customize a unique finish for your building. Brick, stone, ribbed, stained, textured or smooth, there are hundreds of molds to choose from.

Benefits of Precast

- **Speed of Construction:** Your building gets erected much quicker than other building systems. And, when the structure is complete, so is your façade, saving even more time on your schedule.

- **Strength and Durability:** Precast concrete is virtually maintenance-free, providing a versatile and resilient solution for the long-term demands of your building structures. It also exceeds provincial fire ratings.

- **Sound Resistant:** Precast concrete acts as a natural sound barrier, making for more quiet, comfortable living spaces.

- **Controlled Casting Conditions:** Casting concrete in a climate-controlled environment ensures a consistent finish and high-quality, precise product.

- **One Supplier:** The Fritz-Alder Precast team provides the product and installation, eliminating the need for multiple trades on site.

- **All-weather Installation:** In countries like Canada, temperature swings and freezing conditions can limit the number of viable construction hours available each year. Precast provides a key construction schedule advantage, as it can be installed in cold weather.

Fritz-Alder Precast

We've got this!

Elite customer service starts with a quality product that everyone can be proud of and a Fritz-Alder Precast commitment to deliver cost-effective solutions to our customers.

We strive to create unique, value engineered precast possibilities for your project by combining our advanced technical knowledge with continuous innovation.

Our promise to customers:
Be relentless in our pursuit
of **quality** and **precision**,
from design to manufacturing
to installation

Our experience in precast

Established

1972

From barns to solar to nuclear containers to superstructures, Fritz-Alder Precast has completed projects in all different shapes and sizes. Our years of experience in the precast concrete industry dates back to 1972.
