

Digital Combustion *Fire Studio 7*

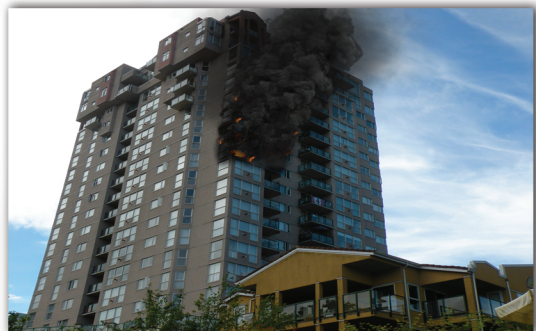

All-Hazard Simulation Software

As Real As It Gets

Digital Combustion proudly announces the release of Fire Studio 7. It is a monumental leap in realism. Fire Studio 7 lets you create any type of emergency incident. From a small house fire to a large scale, multi-agency incident, Fire Studio 7 has it covered.

Everything is included! Fire, smoke, explosions, haz-mat, victims and more! This is the **most realistic** fire simulator on the planet!

With Fire Studio, you can **import pictures** of structures in your local area and create an incident designed specifically for your personnel.

Fire Studio is designed to give you the freedom to create the type of incidents your organization will face and then use a simulation to prepare for it.

Fire Departments, academies, military institutions, colleges, and other government organizations from around the world currently use Fire Studio for their simulation training.

Save and playback your simulation. Show the fire progress from small to fully involved. Display multiple views including rooftops and interiors. Integrate Fire Studio into your training and testing environments.

It doesn't matter if it's a residential house, oil platform, commercial jetliner or fast food restaurant. If it can burn, smoke, leak or explode, it belongs in Fire Studio. Fire Studio is not only a Fire Simulator, it is an "**All Hazard Simulator**".
