KEYMACRO is a free PC macro recording tool designed to allow you to easily create and implement repetitive computer tasks. Follow the mouse cursor to record all activities on your screen and save them as a Windows.bat file for later use. With KeyMACRO, you can also use keyboard shortcuts to automate routine tasks. Enter a time span in which you are willing to have a certain event perform. For example, you could tell KeyMACRO to automatically load a website on your desktop when you have been logged in for a set period of time. The program will then record the mouse and keyboard activities in a.bat file for later use. Once you have recorded your mouse clicks and keyboard shortcuts, you can save the file as a Windows.bat file, which can then be accessed whenever you want to use it. To record a macro, follow the mouse cursor to select an area of the screen where you want to capture the mouse clicks and keyboard shortcuts, and press the record button to start recording. You can define the time span in which you want the macro to be activated. In addition to the standard record function, KeyMACRO also offers a scripting feature, which is useful when you want to make a specific action occur at a certain point in time. Simply choose a point in time and set the program to wait there for a pre-specified time span. The time can be set to several minutes, or to a specific number of seconds. To stop recording, press the stop button, or choose exit from the main window. KeyMACRO can also be used to record keyboard shortcuts. In order to do so, follow the cursor to select the area on the screen you want to record, then press the CTRL-K keys at the same time. KeyMACRO does not work with all Windows versions, so it is recommended to run the program on Windows 7 or newer.

KEYMACRO Review - The program itself is well organized and simple to use. - Only two keyboard shortcuts (CTRL+K and CTRL+K) are supported. - While recording, the cursor has to be visible on the screen. - There is no help function included with the program. - You can set the recording period to 0.01 seconds. - The software has a simple and user-friendly interface.

There are also some apps which have a one-time payment and are meant to be used by the user only once. Why do you do this? I do this for a few reasons. One, I want to help the users to enjoy the best mobile experience possible. And two, I enjoy programming. When will I get my app? To be honest, I can't say that. It's hard to say when a new app will be released. I am working on it regularly, but the schedule isn't fixed. However, I do aim to publish an app every month.
