SnapFIX Crack PC/Windows

The goal of SnapFIX is to provide an alternative to the traditional approach to "peek at a bit of a FIX message" when diagnosing problems or working with the data contained in a message. SnapFIX can be thought of as an interactive text-based debugger for the FIX protocol. SnapFIX allows you to quickly parse a message and view the data contained in it as a list of data objects. This list can be sorted in various ways and can be filtered to show a specific tag, data type, or a list of data objects. The list can be copied to the clipboard or saved as an XML file to further analyze the data. SnapFIX is easy to use and does not require any knowledge of the FIX protocol in order to use. You can start working with the message almost immediately and are not required to know the detailed structure of a FIX message in order to view it. This makes SnapFIX ideal for a troubleshooting or data harvesting application. Instead of guessing at the structure of a FIX message, SnapFIX shows you the data contained in the message. If you are using SnapFIX for diagnostic purposes, you can copy the data contained in the message to the clipboard so that you can analyze it later using a specialized tool. It was developed by the International Organization of Securities Commissions (IOSCO) and has been used in various derivatives trading venues such as the New York Stock Exchange and the London Stock Exchange. IOSCO provides a specification for the protocol, which is included in the Specification for Financial Information eXchange (FIX) on the Internet (www.fixprotocol.org), as well as a compatible implementation. It is designed to be a low-cost, high-performance messaging standard that is applicable to a wide variety of markets and applications.

SnapFIX is a utility for quickly and conveniently helping the user interpret and understand the contents of a FIX message. It is especially useful when troubleshooting FIX messaging problems can be an urgent issue. SnapFIX can parse, display, and output a single FIX message in a quick and easily readable table format. It looks up and displays tag names and the meanings of defined tag values. See for more information. SnapFIX does not work on FIX 4.0 and higher messages. SnapFIX cannot work on all FIX messages, it only handles some of the messages. Its only current limitation is that it only works on messages with no offset-datetime information. See the documentation for further information and limitations. SnapFIX is freeware, there is no ongoing cost and no time restrictions (you can keep using it for as long as you wish). To use SnapFIX first select the FIX message text and copy it to the clipboard, then invoke SnapFIX, e.g. using a hotkey combination or Quick Launch icon. The FIX message is parsed and displayed in a convenient tabular format, it looks up and displays tag names and the meanings of defined tag values. SnapFIX only handles one FIX message at a time. You can run SnapFIX continuously in the background to monitor any changes to the message or just periodically run it when a message arrives. Quick start: - to begin, select any FIX message in the active window - click the clipboard icon (Add key shortcut) to copy the message to the clipboard - invoke SnapFIX
