You can also assign a drawing to a project, add it to a drawing set, or turn it into an assembly. Object-based drawing features include the following: Drafting Drafting is the process of creating a 3D model, or “draft,” of a building or other three-dimensional object. As with a drawing, you can place the object on the drawing canvas and create multiple views of the object. With a drawing, you can define object properties, assign attributes, and link objects to objects. You can also assign a drawing to a project, add it to a drawing set, or turn it into an assembly. Project A project is a group of related drawings. For example, you may be working on an entire home renovation project with several drawings that are related to the scope of the project. You may also have related drawings for multiple phases of the project, such as architectural design drawings, site planning drawings, site engineering drawings, and construction drawings. You can use a drawing set to associate multiple drawings with a project. You can also create one or more folders and assign them to a project. When you turn a drawing into an assembly, it becomes a single drawing. You can associate the assembly with a project or drawing set. Architectural Design Architectural design is the process of creating a 3D model of a building. You can create architectural design drawings for all stages of a project. Site Design Site design is the process of creating a 3D model of a site for a building project. You can create site design drawings to design the site layout and
