Email: es1938driver@aol.com In order to use this card in other OS you will need to download the other adapter. Link to Download ESS PCI ES1938S Solo-1 Driver for Windows XP, Windows Vista, 7, 8, 8.1, 10, 11. In order to do so, you will need to search for the right driver for the ESS ES1938S Solo-1 in the device manager. The most recent driver revision available for the ESS Solo-1 is 1.37. The ESS Solo1 sound card is a PCI sound card that delivers excellent sound quality with PCM-based digital outputs. It has 16-bit digital output via the stereo lines. It also has a line-level front panel jack for easy PC speaker interface. It is equipped with two microphone inputs which can be used as speaker inputs as well. Mar 7, 2007 Also, if you have USB Audio System, do not install the driver from there. Download a better version from PC90.com in stead. However, it is no longer possible to download that driver from that website as the page is dead. If you don't know how to get into and install the driver, please visit the following. Mar 4, 2008 As it's mentioned there, in

Updates,, Windows Updates; Comprehensive. Last updated: 9/1/2012; Download Date: 8/29/2011. How To Fix sound problems with your laptop after installing a pci device Hi All, I'm a technology geek, so you will probably find what I'm doing here doesn't make any sense; however, I'm sure your expertise will be able to aid me in a Linux issue. I have a video card (ATI) with an onboard sound module. It started breaking sometime after I installed IceWM on my PC. It turns out the onboard sound module has a separate chip from the video. Right now my problem is I have no video and no sound with either Snd_es1938 or snd_sonic. I'm kinda lost and could use all the help I can get. I'm almost positive that the sound chip is not damaged because I've tested it with Soundblaster Live! 1.1 and it works fine. I'm dual booting with Windows XP. Any help would be appreciated. This is my pc, when I get sound I'll give you the EXACT steps I'm using. Ok, here it is. But first, you need to know that I have no sound now even with a different sound card. I have a Creative Audigy 2 platinum and it has been installed for a while. And I have had the onboard sound card for a while now. I have no sound from either my speakers, headset, or any onboard ports. This is what I have been doing to troubleshoot. 1.) I tried to install my speakers and it said they were not compatible. But I see pics of people installing speakers so it must be possible? 2.) I tried to install my motherboard driver, so I get some sort of power option screen, and it says, Offboard Sound, Onboard, and memtest. 3.) I tried to install the onboard sound card. 4.) I looked to see if the drivers I have installed are working. So I have the drivers for my Soundblaster Live! and for my Ethernet controller. 5.) I uninstalled the onboard card and re-installed my motherboard driver as you can see in the first picture. 6.) I tried to find the right resolution for the resolution I have installed for my video card. 7.) I tried the Snd_ES1938 driver but that did not help either. 8.) I uninstalled the Audio 82138339de
