Field of the Invention This invention relates to engine oil compositions containing amines, and more particularly to engine oil compositions containing amines and reaction products thereof with polyvalent metal compounds. 2. Description of the Prior Art In U.S. Pat. No. 3,819,595 a lubricating oil composition containing amines and sulfurized olefins is described. In this patent the amine is present in a sufficient amount, i.e. from about 0.1 to 1% by weight, to form an additive mixture which inhibits the oxidation of the lubricating oil during storage or use. It is believed that the amine is added to the oil in order to neutralize acidic impurities which are introduced into the oil composition during its manufacturing process or to add corrosion inhibition properties. The preparation of a sulfided olefin and amine reaction product by reacting a mixture of an alkylphenyl amine and sulfur trioxide is described in U.S. Pat. No. 3,875,252. This patent discloses that a reaction product of the sulfided olefin and amine has improved corrosion inhibiting properties. U.S. Pat. No. 4,490,337 discloses a
