

Mobile Apps Development

Remember when everyone thought that “Mobile apps are the future”? Well, they were right and the future has been around for a number of years. If you are ready to build your first mobile app or are wanting to improve upon what you have already, we want to be your go-to team. We have a team of mobile strategists, designers, and developers who are experienced and effective in the development of Android, iPhone, and iPad apps. We have developed games, social networking applications, news, GPS/mapping based solutions, audio/video solutions, reference, business related and many more. Some of the apps developed by our team have already had more than a hundred thousand downloads.

Apple IOS App Development

We have a team of 18 highly skilled iPhone-iPad application developers with excellent working knowledge of the iOS SDK, Xcode as a development environment and Objective-C. The team has strong analytical skills which helps in better understanding of the requirements. Add to this our US based project managers and technical architects and we

have a formidable combination of resources to deliver your iPhone/iPad app with the best quality possible.

Here is the list of few features which we have already implemented in our apps

- OpenGL game development.
- Live Audio, Video streaming from server.
- Chat applications developed using TCP protocol.
- Uploading and downloading files from ftp server.
- Showing graphs according to real time input data.
- Showing directions/route on map view in real time.
- Image Processing and creating frames from multiple images.
- Showing Karaoke on screen according to the song music play.
- In app Purchase, push notifications ,iAd & AdMob implemented.
- Social networking sites incorporated Facebook, Twitter, Dig and LinkedIn.
- Displaying iPad screen on big screen (VGA Device) using iPad Dock connector to VGA adapter

- Facebook features implementation like fetching user's profile data, posting messages to wall, downloading /uploading images from account & uploading videos to wall.
- Applications database Sync between iPhone and different operating systems (Windows & Macintosh) using Bonjour Web.

Android App Development

We have formed a team of programmers with a solid knowledge of Android SDK, Java, OOD/OOP, JS, JNI, NDK and debugging tools. Our team is excellent in using profiling tools and shell scripting which is required at times to develop Android apps free of issues like memory leaks that can cause performance problems. Along with the development of android apps independently from scratch, we can port apps that you already have for iPhone to Android.

Here is the list of few features which we have already implemented in our apps

- Chat application developed using TCP protocol.
- Created custom Listener that “listens” to phone state changes.
- Created dynamic UI by interpreting data received from a web service call.
- OpenGL game programming.
- Live Wallpapers.
- Video Streaming from “http” URL source

- Audio recording and streaming.
- Widget programming
- Map view integration and route plotting.
- Bluetooth device discovery and pairing.

Windows Phone App Development

Although newer to the market and less popular than iOS and Android phones, Windows phones are growing in market share. We have put together a highly skilled team of Windows app developers who have successfully delivered apps on Windows AppWorld. Most of the apps we have developed in this platform were done for clients that already had apps in the other versions first and wanted to “complete” their mobile offering..
